25645 Verified customer concern. On test drive found that charging
system warning displayed on instrument cluster. Returned to workshop
and checked charging voltage. Battery was charging at 12.24v. generator
output was at 13.01v. Rechecked under load and found voltage dropped to
12.7v and battery was at 12.3v. Recommend replacement of generator and
drive belt if not recently replaced. Battery also has high internal
resistance and failed load test. Possible that battery maintainer was
masking charging system failure.
