EPA# CAD981385446

BAR# AD015399

I AUTHORIZE the dealership to repair my car as deemed necessary to return my car to pre-damage condition or better. I understand that the final bill will accurately reflect the actual repairs. Additionally I am aware that the dealership's estimate and the insurance company estimate are only for the purpose of negotiation and they both may differ substantially from each other and the actual repair as long as the final repair costs are the same as the estimate bottom line figure negotiated with the insurance company.

I UNDERSTAND that ultimately I am responsible for the payment of the cost of repairs and acknowledge an express mechanic's lien on vehicle to secure the amount of repairs thereto.

IN ADDITION, I do acknowledge that dealership will not be held responsible for loss or damage to vehicle or articles left in vehicle in case of fire, theft, accident or any other cause beyond our control. I grant the dealership and its employee's permission to operate the vehicle on streets or highways for the purpose of repairing or testing.

STORAGE FEES: There is a \$195.00 per day storage fee if above said vehicle is left for more than 24 hours after notification that repairs are completed. If vehicle is returned to me before work is performed, a daily storage and diagnostic fee as well as handling charge and reassembly costs may apply.

IF REGARDING an insurance claim, I, the undersigned do hereby constitute and appoint the above mentioned dealership as my trustee and lawful attorney to sign my name on any insurance draft covering any authorized repairs to my automobile, and take such, as may be necessary, to negotiate said drafts.

ADDITIONALLY, I authorize the insurance company paying for the repairs to send all payments direct to the above mentioned dealership at their address listed on the header of the repair order.

DIAGNOSE DAMAGES \$750.00 (Includes Estimate Fee, Disassembly & Reassembly/**Fees may change based on type of vehicle**). Dealership to reassemble within 3 days after customer declines repairs.

I ACKNOWLEDGE that repairs have been completed and has been returned to me in pre-damage/loss condition. I certify that repairs have been completed as indicated on the final automated repair estimate.

## LABOR CHARGES

The repair or replacement procedure units on which your estimate or billing has been calculated are based on labor procedures established by various labor operations database system suppliers. Since the skill and speed of each technician varies and some repair procedures require two technicians the charges are not based on a sixty minute hour.

Thank you,

## **INSTALLATION METHOD FOR HEAD STUD KITS**

**Part Number: 204-4707 Application: Porsche 3.4L Non-Turbo water-cooled engine**

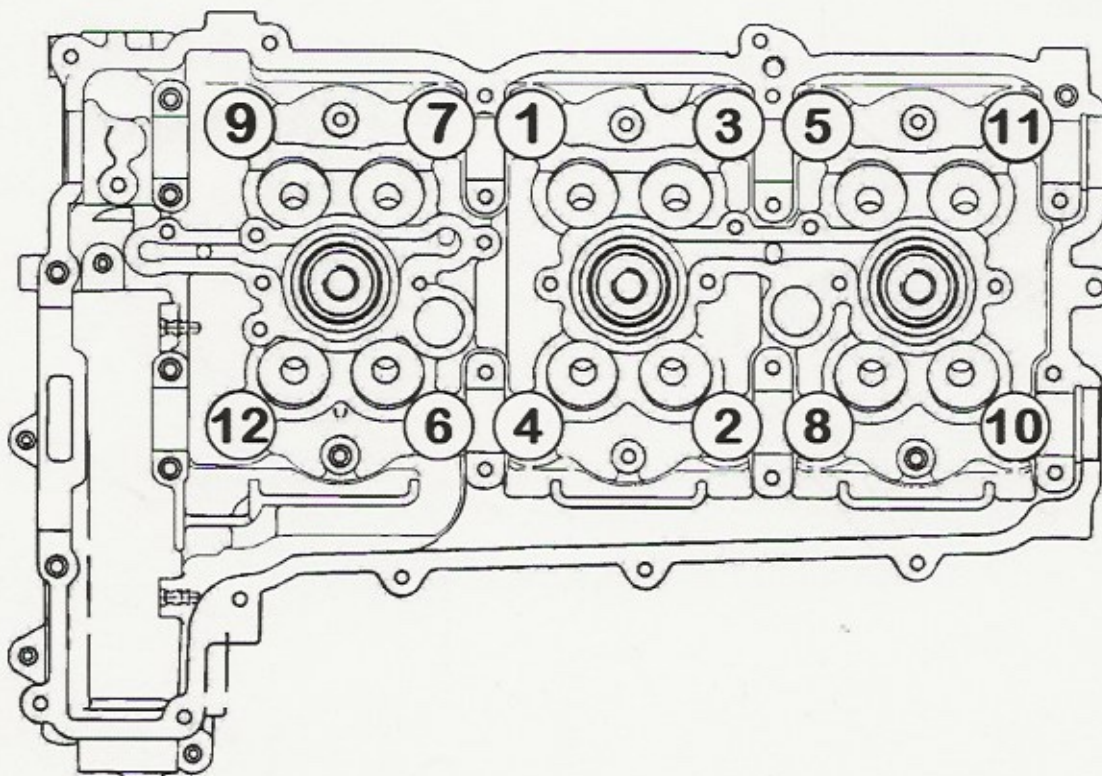

1. Always verify the part number for your application with the part number on the side of box and the part number on the instruction sheet. This will help ensure you have the correct installation procedure for your specific application before installing any components.
2. Clean and inspect all hardware prior to installation. Look for obvious defects or shipping damages, plus proper fit, length and dimension.
3. To ensure proper thread engagement and accurate torque readings, clean ALL threads in the block. Chase if necessary with ARP Thread Chaser, part number 912-0003 (M10 X 1.5).
4. Screw the head studs into the left hand and right hand engine cases "HAND TIGHT ONLY".  
**NOTE: LOCTITE MAY BE USED IF A PERMANENT MOUNTING OF THE STUDS IS PREFERRED.**
5. Install the cylinder heads as described in the Porsche factory service manual. Check for binding or misalignment.
6. Lubricate the stud threads, nuts and washers with ARP ULTRA-TORQUE FASTENER ASSEMBLY LUBRICANT. Then install the washers and the nuts onto the studs and tighten them hand tight. ARP recommends using the ARP ULTRA-TORQUE FASTENER ASSEMBLY LUBRICANT that is provided with each kit as opposed to motor oil. This is due to higher friction on the studs as well as inconsistencies in the clamping force of the fasteners when motor oil or other low quality lubricants are used.

### **PRELOAD (TORQUE) RECOMMENDATIONS**

7. Following the manufacturers recommended torque sequence tighten the nuts in two equal steps to 60 ft lbs with ARP ULTRA-TORQUE FASTENER ASSEMBLY LUBRICANT.

**Note:** ARP Ultra-Torque Fastener Assembly Lubricant has been specifically designed to reduce tension preload scatter and eliminate the need to cycle high performance engine fasteners before final installation. ARP Ultra-Torque far surpasses all requirements offered by previous ARP lubricants in terms of fastener preload repeatability and performance lubricating properties. For more information on ARP Ultra-Torque visit our website at [www.arp-bolts.com](http://www.arp-bolts.com) or call 1 800-826-3045.

## **Bolt Torque Sequence**

## **INSTALLATION METHOD FOR PRO SERIES MAIN BOLT KITS**

**Part Number: 204-5001 Application: Porsche 3.4L-3.6L (Non Turbo) water-cooled engines**

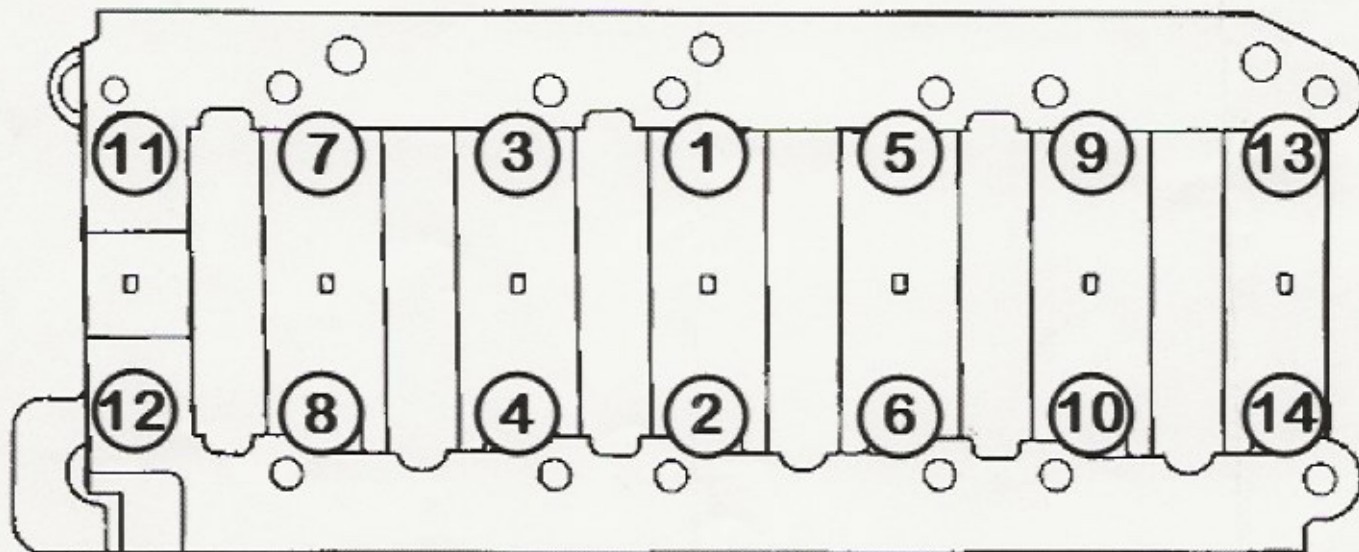

1. To ensure proper thread engagement and accurate torque readings, clean **ALL** threads in the block. Chase the threads if necessary.
2. Clean and inspect all hardware prior to installation. Look for obvious defects or shipping damages, plus proper fit, length and dimension.
3. Make sure there is an adequate chamfer around the bolt holes on the main bearing cap housing to clear the radius on the under head of the bolt.
4. Install the bearings and the crankshaft into the main bearing housing and assemble the housing halves according to the Porsche factory service manual. Check for binding or misalignment.
5. Lubricate the under head of the bolt and the bolt threads with ARP ULTRA-TORQUE FASTENER ASSEMBLY LUBRICANT. Then install the bolts into the main bearing housing and tighten them hand tight. **ARP recommends using the ARP ULTRA-TORQUE FASTENER LUBRICANT that is provided with each kit as opposed to motor oil. This is due to higher friction on the bolts as well as inconsistencies in the clamping force of the fasteners when motor oil (or low quality lubricant) is used.**

### **PRELOAD (TORQUE) RECOMMENDATIONS**

6. Following the manufacturers recommended torque sequence tighten the bolts in three equal steps to 50 ft lbs with ARP ULTRA-TORQUE FASTENER ASSEMBLY LUBRICANT.

**FOOTNOTE:** When changing from factory fasteners to high strength fasteners, clamping force and tolerances will change, therefore it will be necessary to check the main bearing bores for proper size and out of round condition after installation of the bolts and align hone the cylinder block if necessary. The main bores should always be align honed using the same fasteners and lubricant which will be installed during final engine assembly at the recommended preload.

## Invoice Notes

### Notes:

- After above service, vehicle was brought to operation temperature and fluid levels were checked and topped off as needed.
- Tire pressures set to: Front 37 psi and Rear 44 psi
- Tire tread remaining: Front 9/32" and Rear 7/32"
- Brake pad material remaining: Front 8 mm and rear 10 mm
- Recorded Fault Codes From All Modules And Then Cleared All Faults. See Attached Sheets.

Bureau Of Automotive Repair License # 00239756

Most parts are warranted by their manufacturer, usually for 90 days from the date of purchase, unless otherwise specified. Used or customer supplied parts carry NO WARRANTY EXPRESS OR IMPLIED. Pacific Power Motorsports warrants their work for 3 months or 3000 miles. Parts and labor used for track or competition purposes are warranted against manufacturer's defects only. We do NOT recommend illegal modifications for street legal automobiles.
